

MUSICAL BASICS

Hey Musical Family,

There's a few things that I'm **genuinely** excited about lately - and I wanted to share them with you.

First - Belgium, June 11, 2026

I will be performing at Theaterzaal Maupertuis in Zaventem. And it won't be a traditional recital.

It's a night where piano, epic EDM sounds, and jaw-dropping bass collide. Think Beethoven meets Skrillex meets Hans Zimmer. It's going to be a piano concert unlike you've ever seen before.

It is also for a good cause - the event supports the Lions Club Zaventem National Airport Erasmus and their local charity work.

special.

Audience Reviews From My Previous Concerts:

"My best concert. EVER. The sound... well you had to be there to experience it, from this incredible venue." - Cassandra S. (London, July 2022)

"This concert was absolutely transcendental sitting in the front row. The livestream just can't capture the magnitude of the whole concert it was absolutely surreal." - Austin G. (Washington DC, March 2022)

HOW TO GET TICKETS

Second - a hilarious moment from CES 2026 back in January.

I was invited by one of the central hall exhibitors to perform some piano, and while I was there, I ran into a Chinese comedian who does an *uncannily* good Donald Trump impression. He is quite famous on the Internet for being **the** "Chinese Trump."

Not political. Just for laughs.

If you need a quick smile, here it is:

Third - and this one is interesting for those of you who **love** practicing piano...

What happens when you play La Campanella on a “Narrower Keyboard”? (I just released this [video](#) 30 minutes ago. Not even joking.)

In this video, I **compared** what it’s like to play **La Campanella** on a **standard** keyboard vs. the **narrower DS6.0 keyboard**.

Not theory. Not opinions. A real, physical demonstration.

On a standard keyboard, small hands pay a hidden tax on:

- 1) Every big jump
- 2) Every wide chord
- 3) Every octave run

More tension. More practice hours. More risk.

You can watch the video here:

La Campanella Comparison Video

But less distance to travel - which means less strain and more control.

And if you want the full context, my latest **blog post explains the “why” behind it:**

Blog Post: La Campanella

That's it for now.

Thanks for being part of the MusicalBasics family - it truly means a lot to me.

Talk soon,

Sincerely,

Lionel

P.S. If you've ever wondered whether a narrower keyboard would help you play better, you should definitely check out our new keyboard, DreamPlay.
